

Raw model

Snapshot of flow simulation

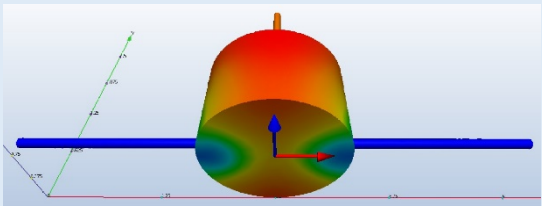

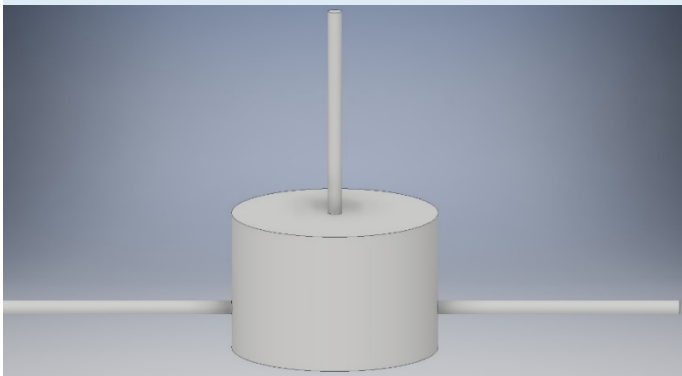

Comments

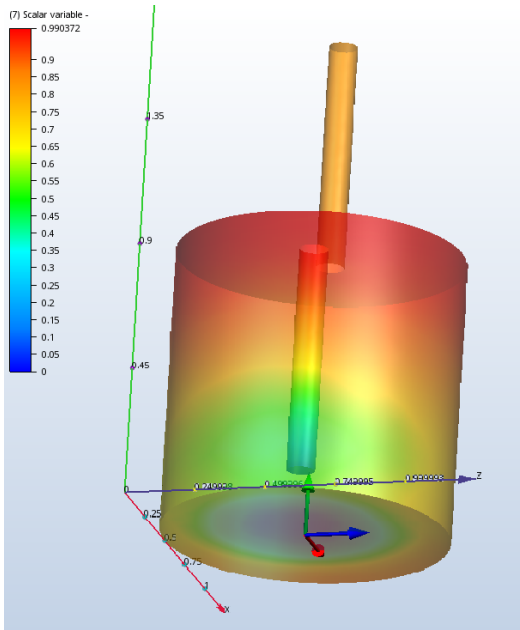

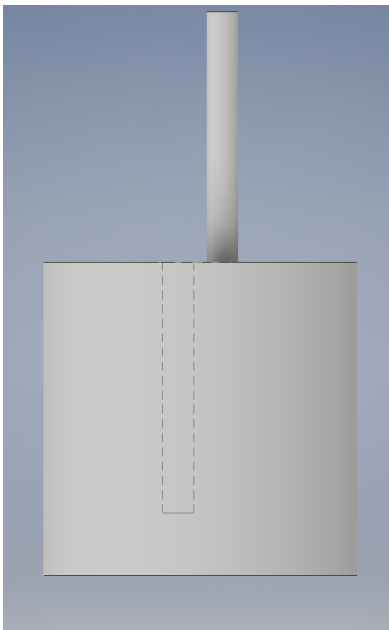

PROTOTYPE 1
[1 inlet, 1 outlet,
different heights]
Same mould as the
one already in place

PROTOTYPE 2
[1 inlet, 1 outlet,
same side]
Least promising
model due to very
slow inflow which
doesn't provide
mixing

PROTOTYPE 3
[2 inlets, 1 outlet,
different faces]
Probably the most
promising but most
impractical one (mor
tubes, on the lid and
the sides)

PROTOTYPE 4
[1 inlet, 1 outlet,
different heights]
Compromise, seems
more efficient than
the first model, and
means that we could
keep the regular well
and add a lid with th
tubes.
