

Raw model

Snapshot of flow simulation

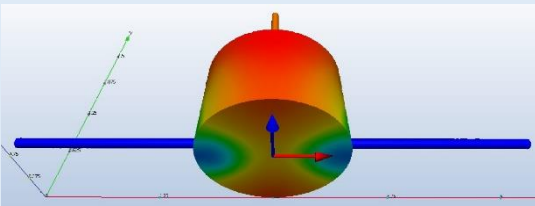

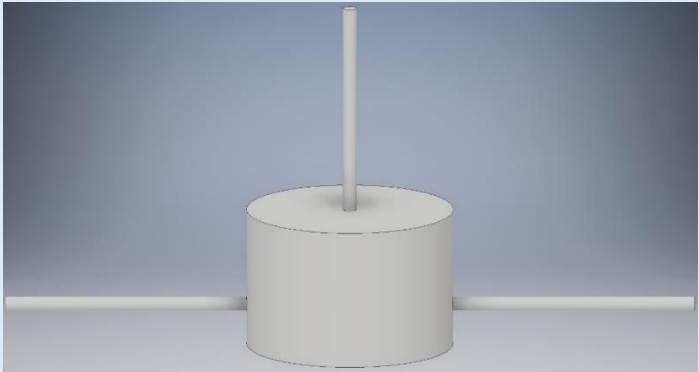

Comments

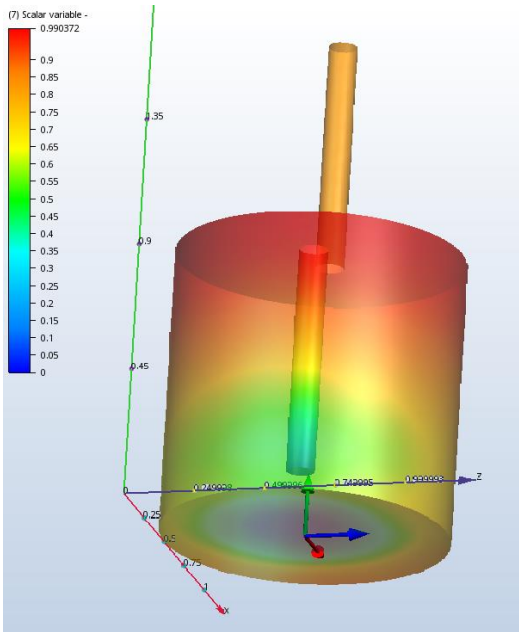

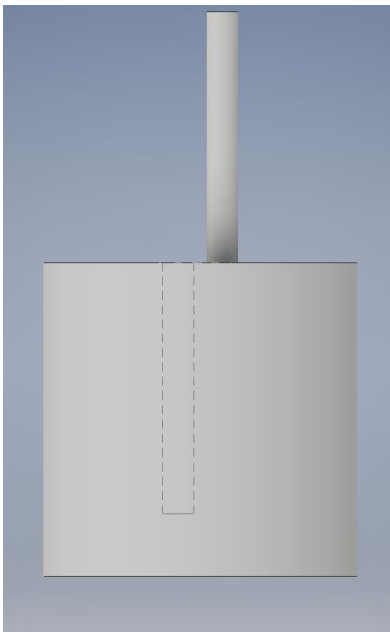

**PROTOTYPE 1**  
[1 inlet, 1 outlet,  
different heights]  
Same mould as the  
one already in place

**PROTOTYPE 2**  
[1 inlet, 1 outlet,  
same side]  
Least promising  
model due to very  
slow inflow which  
doesn't provide  
mixing

**PROTOTYPE 3**  
[2 inlets, 1 outlet,  
different faces]  
Probably the most  
promising but most  
impractical one (more  
tubes, on the lid and  
the sides)

**PROTOTYPE 4**  
[1 inlet, 1 outlet,  
different heights]  
Compromise, seems  
more efficient than  
the first model, and  
means that we could  
keep the regular wells  
and add a lid with the  
tubes.
